S2 Monobloc

Since 2000, Mountair has been successfully producing the new Monobloc S2 series. The distinguishing features of this system are on the one hand the absolute thermal separation of the whole housing such as panels, profile sections and corner profiles, and on the other, rigorous compliance with hygiene aspects such as smooth internal surfaces without ledges on the profiles and external fasteners. This means that our S2 Monobloc is designed to also be used in sophisticated plants such as in pharmaceuticals/laboratories, food production and hospital buildings.

Notwithstanding the S2 standard types given in this document, we attach importance to individuality. Thus, if required, we can produce any intermediate size and also offer any special design.

On the basis of this documentation it is possible for you to define the size and weight of your Monobloc for yourself, within a reasonable time.

S2 Monobloc

Housing and mounting parts

The S2 construction system is a robust aluminium frame design [AlMgSi], which ensures three-dimensional independent climate envelopes with rigorous thermal insulation for use in indoor and outdoor areas. The aluminium extruded profiles with thermal separation, which can be in various lengths as required, are connected by means of ingenious three-dimensional corner profiles [without cold bridges]. Double walled panels, wall thickness 42 mm / 54 mm or 100 mm, with hard foam, rock wool or honeycombed flame retardant, fire class BKZ 5.1 CEN/DIN B1.

Panels with a surrounding profile for thermal insulation of the insides of the panels and the outer parts. The two seal levels mean that leakage is reduced to an absolute minimum. The simple mounting allows robust steel constructions which are faced with fixed or openable sandwich panels. All surfaces are let in so that the frame fits closely, allowing a clean surface to be created. The panels which can be opened for service purposes are fitted with adjustable external hinges and locks. Parts with rotating elements are fitted with hexagon locks, other doors have handles. The frame construction can be specified so as to be separated throughout or thermally separated, depending on the requirement and application of the corresponding cube.

Additional equipment [optional]:

- Doors with locking cylinder
- Spare hexagon key
- Complete wiring of the Monobloc fed to the outside
- Pressure measurement nipple fed to the outside

Dampers and flexible connectors

Counter flow fin dampers in aluminium with inserted seals. The drive mechanism is inserted into the structure, square leading axis. 30 mm connecting frames. Thermally insulated outside air/ exhaust air dampers. Optional: tight dampers according to DIN 1946/4, a number of drive axes according to surface and torque (see diagram page 28).

Filter

Standard filter elements in central tensioning frames. Frames are powder coated or optionally in V2A or V4A steel. Filter cell seal is in EPDM hollow profile seals as surrounds. Pocket filters with wooden frames, plastic frames or metal frames. Manufacturer varies according to your choice. Use of tested filter cells according to EN 779 standard. Energy efficiency class according to specification.

Filter grades H11 to H14: Mounting of aerosol nozzle, filter frame with tight fit test groove. Pressure loss display with visual pressure loss gauge or with electrical differential pressure switch is optional.

In addition to visual filter pressure loss display, the following can also be offered:

- Differential pressure display mounted externally
- Differential pressure with/without display, with/without digital contact
- Differential pressure switch

- Spare filter
- Pans under the filter section
- Filter frame with test groove

Fans

Radial fan of high quality and optimum efficiency mounted on a robust base frame and with vibration dampers. Individual sizing according to application. The motor is on clamping slides with central clamping bolt. Drive with v-belt or flat belt. If with flat belt, then dual axis adjustable clamping slides are incorporated. Pressure sided decoupling with flexible connection. Free running impeller fan and fixed mounted drive motor with reinforced bearings. Motors with thermistor for operation with frequency inverters. Fan and motor mounted and fastened on the robust frame structure via vibration dampers. Intake side decoupling with flexible connectors.

Plug-in fans with EC motors with directly integrated inverter units for direct triggering with a 0 – 10 V signal.

Optional: Fans with Measurement ring line in the inlet nozzle and direct square root [digital and electrical output signal].

Optional: Inspection glass and lighting, reserve belt, protective safety grill.

Additional equipment [optional]:

- Motors with mounted frequency inverters
- Control panel built into the front panels
- Inspection glass
- Internal lighting
- Measurement ring line connection fed to the outside
- Measuring transducer with/without flow rate indicator with signal output
- Differential pressure switch as flow monitor
- Oppermann sensor mounted with/without processing electronics, loose
- Spare belt
- Motor with thermistor
- Protective safety grill
- Electrical connections prewired to a terminal box

Expansion section

With incorporated perforated baffle plate fastened to sturdy carrier bars.

Sound attenuators

Noise baffles according to acoustic sizing with rounded edges. As required, with inlet cap, perforated plate or hygienic non-woven covering. Frame material galvanised or optionally in V2A steel. Abrasion resistant mineral fibre. Compliant with the standards, carcinogenic index KL>40.

Additional equipment [optional]:

- perforated plate cover as enhanced mechanical protection
- inlet cap

Humidifiers

Contact humidifier in incorporated housing, interior V2A steel with pan and drain. Accessibility and design are according to currently valid hygiene regulations. Additional

equipment with UV lamp, water quality measurement and automatic desludging is available. Feed water requirements: Softened. Designed as adiabatic return air humidifier.

High/low pressure atomiser in incorporated housing, interior V2A steel with pan and drain. Complete profile powder coated. Nozzle rack and turbolators in V2A steel.

High pressure pump station supplied loose for external installation. Accessibility and design are according to currently valid hygiene regulations. Designed as supply air humidifier or adiabatic exhaust air humidifier. Feed water requirements: Osmosis.

Dual humidifier in incorporated housing interior V2A steel with pan and drain. Complete profile powder coated. Nozzle rack and turbolators in V2A steel. Pump station supplied loose for external installation. Accessibility and design are according to currently valid hygiene regulations. Designed as supply air humidifier or adiabatic exhaust air humidifier. Feed water requirements: Osmosis.

Steam humidifier with steam lance and V2A steel pan and drain connections. Incorporated front door. With steam generator or valve for connection to an external steam network. Designed as supply air humidifier.

Additional equipment [optional]:

- Inspection glass with cover
- Illumination
- Conductivity measurement sensor for desludging
- UV lamp to reduce germ growth in the water bath
- Electrical connections wired to a terminal box
- Multi-stage control with valves in the control cabinet
- Steam valve already incorporated
- Compact steam generator with complete controls and steam hose

High performance Airsol® circuit connected system (CCS)

Combined cycle systems standardised for high efficiency and optimised for annual level of utilisation – accurate and down to earth. System equipment complete with hydraulic section and heat recovery controller. Cu tubes 0.4 mm, hydraulically expanded. Fins min. 0.2 mm. Frame in stainless steel or AlMg3. Collectors in copper with gunmetal threads. Whole heat exchanger produced in non-ferrous material. Heat exchanger optimised hydraulically to maximum counter current exposure, fully ventilatable and drainable. Pressure PN 16. Design according to Eurovent, hygiene aspects concerning cleaning taken into consideration.

Optional with pipework in steel, copper or stainless steel.

Additional equipment [optional]:

- Rotameter supplied loose
- Defroster heat exchanger
- Defroster cleaning unit automatic
- Adiabatic cooling of the exhaust heat recovery

Fin coil Airsol® heat exchanger

Designed as heater, cooler, evaporator, condenser on the basis of a high-performance combined cycle system. Air cooler battery: Drip pan in V2A steel, drain downward with external thread. In the case of direct evaporation, interconnect from the bottom upward. Suction line at the

bottom. Droplet separator in PP in stainless steel frame. Pan slanted, drain downwards. Air heater battery in CU/Alu/V2A/Ms. Design and manufacture according to the AIRSOL® system; "good engineering". Mounted on chassis runners in V2A steel. Standard counter current from the bottom upwards.

Additional equipment [optional]:

- Flanges screwed on or supplied loose
- Internal ventilation fed outside
- Internal piping
- Enhanced version for higher heating medium pressure
- Pan heaters

Frost protection grid

Frost protection parts and capillary filler. Designed as retractable drawer with handles or mounted as a fixed grid on the exchanger and with a service component.

Rotor heat exchanger (RHE)

Rotating regeneration wheels in sheet-metal housing. Rotors for high temperature and moisture recovery are in aluminium, oxidised aluminium or with epoxy coating. Rotors in PP for sea water resistant designs. Pedestal bearings, adjustable seals, purge section, drive motor with belt drive are integrated elements.

Additional equipment [optional]:

- Inspection glass
- Spare belt
- Segmented rotor
- Cassette divided rotor

Dezecor® sorption rotors

High performance rotors made of inorganic fibre with low temperature zeolite. In addition to the high-performance capability, Dezecor® rotors are characterised by the selective water load (no odour transfer) and low regeneration temperatures. Rotor sealing on the housing comes with a high-quality mechanical seal. Speed controlled drive with activated rotor monitoring. Brushless DC drive systems for extreme adjustment ranges at constant torque.

Plate heat exchanger (PHE)

The aluminium plate heat exchanger is built into an independent cube and completely sealed. Integrated bypass damper for performance control. Recuperative heat exchangers condense the latent heat (moisture) in the exhaust air. Designed taking into consideration the temperature stratification and risk of frost. Large area stainless steel drip water pan. Optional: Designed as either a double plate or counter current heat exchanger in PP, epoxy coated or with hydrophilic surface. Optionally, with moisture transfer.

Additional equipment [optional]:

- Aluminium plate heat exchanger, coated
- Double plate heat exchanger
- Enhanced temperature resistance
- Enhanced pressure resistance
- Adiabatic wetting
- Pan heaters

Base frame

Bolted and welded construction in steel, hot dip galvanised, with height adjustable feet on rubber buffers.

Additional equipment [optional]:

- Design in V2A / V4A
- Adjustable according to ground unevenness

Special designs

Exterior installation

Monoblocs are delivered in the standard RAL 7015/7035 UV-stable design. Other colours or V2A / V4A are available upon request. V2A bolts. Optionally, the aluminium profiles and weather protection grates can also be delivered in the same colour. Entire Monobloc in thermally decoupled profiles. Additionally, a glued-on waterproof Sarnafil sheet incl. all-round drip nozzle; increased plinth height. Additional equipment [optional]: weather protection grating, rain cover, mesh screen, platform above openings below, transport and lifting straps.

Design with fire index number

Entire Monobloc housing in hardwood, completely planked with Duripanel plates with the fire index number EI30 / EI60 or EI90, interior mass identical to the S2 types. Monobloc length and connection supports are defined project-specifically.

ATEX conform design

For use in areas at risk of explosion.

Soundproof design

In addition to the acoustically optimised panel filling with wool [approx. 15 dB at 250 Hz], the panels can be fitted with a sound-deadening layer. The additional insulation amounts to approx. 8 dB at 250 Hz.

Special Monoblocs

Our S2 system and ingenuity have almost no limits. Whether you need cm-exact special designs, angled Monoblocs or complete climatic chambers for interior and exterior installations, we can fulfil your requirements. Test our flexibility!

Refrigeration machines – heat pumps

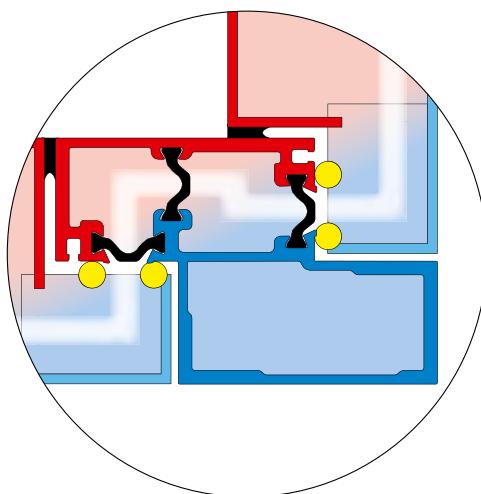

Complete refrigeration system divided according to performance level. Speed-regulated compressor. Coolant R407c, R410a, R134 and many more. Aggregate loose or built in.

Control

Completely automatic control. System and control description, electrical diagram, control cabinet, internal wiring, start-up and acceptance report with maintenance instructions. Control consisting of measuring units, controllers (DDC) and actuators. Communication interface (BUS), modem and remote maintenance. Brands: Siemens Syncro, Siemens Climatix, Siemens S7 [on request] or Beckhoff.

Monobloc/AHU-housing

The Monobloc housing is designed with frame and sandwich panels, as for air conditioning stations. This means good insulation (noise and temperature) and a design without thermal bridges. The Mountair S2 housing fulfils the applicable hygiene norms VDI 6022 and is EN certified T2/TB2. The frames are in aluminium, the panels powder-coated, two shells without exposed insulation. The delivery is made in one part. Mountair is a Swiss product with design advantages, that is long-lasting and economically interesting.

Hygiene – VDI 6022

Corner profile and panels are continuous fitting with no penetration possible.

Proven sealing technology

Doubled, continuous sealing
interior-exterior

Thermal separation

Panel – Profile – Corner

Tender Specifications

Standard version for indoor installation

Ventilation and air conditioning Monoblocs of a segment design for indoor installation consist of a corrosion resistant profile frame in aluminium (AlMg Si 0.5) with inserted seal. The whole profile frame structure is thermally decoupled up to the heat recovery section. The segments are connected to each other by bolts and sealing strips. The thermally decoupled sandwich panels (42 mm, 54 mm or 100 mm) are in galvanised steel sheet, powder coated (RAL5012, 60-80 µm) both sides, with surrounding aging resistant sealing bead. The sheet thickness inside and outside is 0.8-1.0 mm with 42 mm, 54 mm or 100 mm honeycombing/rock wool PIR sandwiched between. The inner lining is smooth walled, without any projecting parts in the interior space.

The Monobloc floor is without grooves or cavities. The panels are fastened from the outside with screws. Monitoring of the fan belts is through a double shelled inspection window which includes interior lighting.

The monobloc segments are mounted on a sturdy base frame made of galvanised profile steel and fitted with adjustable rubber feet. The design and construction are tested according to EN 1886.

For maintenance of the installed parts, the operating side has access doors with three-dimensional adjustable hinges and lever operated locks and have surrounds permanently inserted which have elastic double seal bead in the door leaf. Doors open outwards.

Sufficient space is provided between the individual air handling elements for the installation of control devices. Strength and tightness of the walls and other elements are reinforced and dimensionally stable and are designed to accommodate the negative and positive pressures in the device for maximum operating performance.

All duct connections are provided with elastic connecting pieces with coated polyester fabric, temperature resistant to 200 °C, incombustible (BKZ 6 q 3 - q). All connections to the ventilation device are equipped with potential equalisation.

Housing design according to EN 1886

Monobloc dimensioning

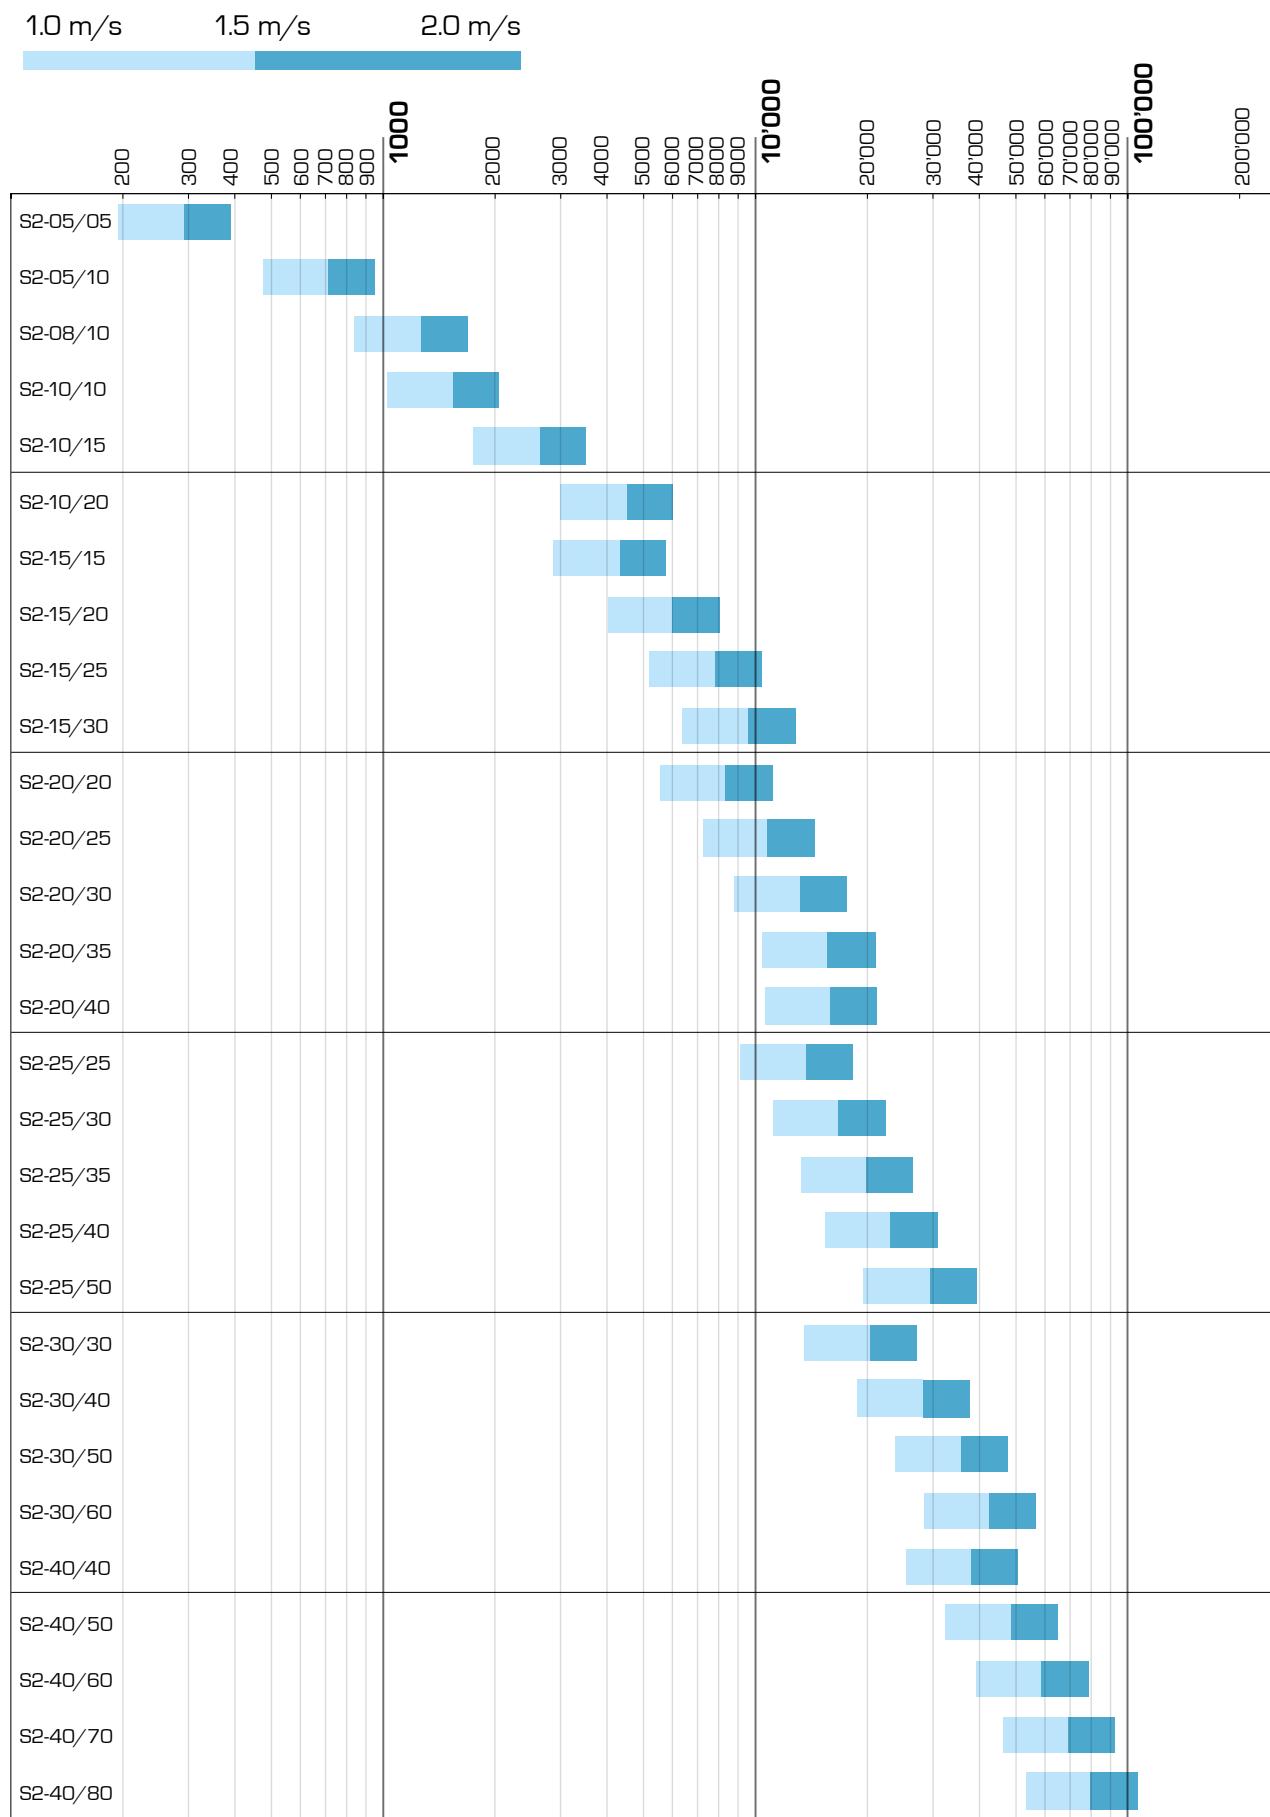

Monobloc/AHU calculation

- Length of a cube = sum of all element lengths + 10 mm
 - Overall length = sum of all single cubes
 - Normal ceiling reference grid 50 mm / 100 mm, panel length = element length - 50 mm
 - Profile thickness revision face 30 mm, end face 60 mm, below / above 30 / 60 mm
 - Maximum cube length: 6000 mm

Base frames

Floor base frames

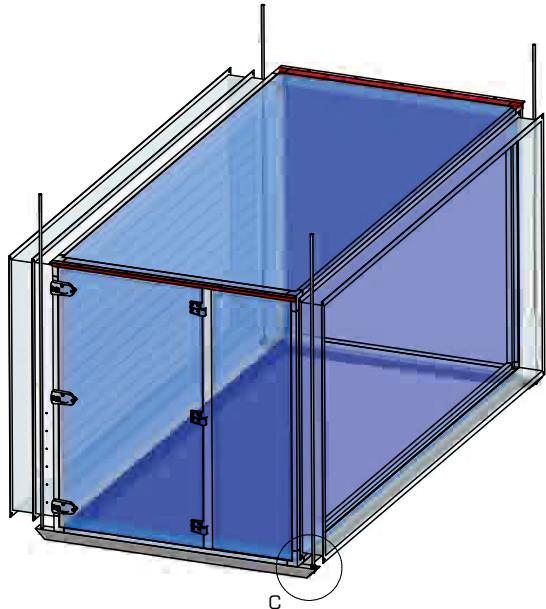

The consoles with feet is produced in welded 50 mm square steel tubing. For very large and heavy Monoblocs, 80 mm square steel tubing is used. One console per Monobloc cube is the standard. The welded steel frame is completely galvanised and then fitted with adjustable rubber feet. The usual base frame height is 100 to 500 mm; in addition a special solution can also be offered. Feet are adjustable over a range of ± 15 mm. Unless otherwise agreed, the base frames are bolted to the cube and delivered.

Ceiling mounting

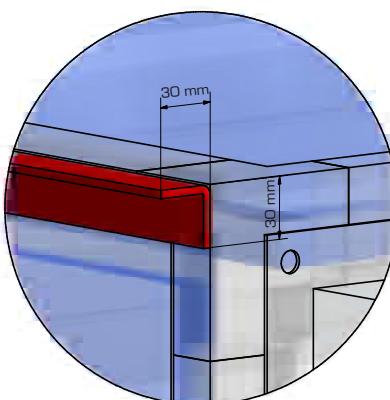

Smaller units can be fitted with aluminium or V2A steel brackets for direct mounting on the ceiling, depending on customer requirements.

You decide the fixing points on site, and you make the suspension holes yourself. Larger units are produced in 50 mm square steel tubing which has lugs welded on for fixing. Threaded rods are usually used for mounting. Here the suspension holes are decided beforehand and defined in a layout plan.

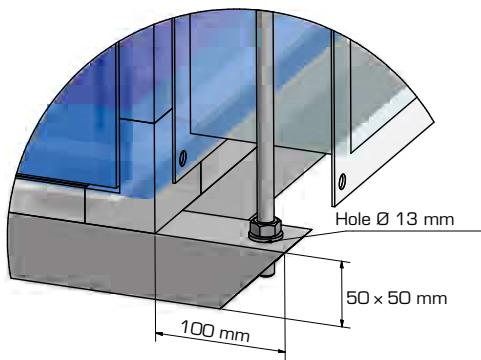

Special design

We can of course also fulfil your particular wishes, whether they concern wall consoles or height-adjusted floor consoles.

Ceiling mounting brackets

Console ceiling mounting

Damper actuators

The number of damper actuators depends largely on the size of the damper. In addition the maximum differential pressure, blade size, struts, materials, sealing class, etc. also play a role. The table below can be used as a help in determining the size.

Reference values for the damper torque in NM (per actuator)

		1 Axis			2 Axes			3 Axes			
Height [mm]	Type										
3600	50	16.0	28.2	20.2	30.3	36.4	40.0	45.8	30.3	33.3	36.4
